

ABSTRACT OF THE DISCLOSURE

5 A video signal reproduction apparatus for receiving
an information signal including a video signal and a
determination signal indicating a type of the video signal,
and reproducing the video signal included in the information
signal. The apparatus comprises a conversion section for
converting the video signal to a progressive scan video
signal, and an aspect ratio conversion section for
10 converting an aspect ratio of the progressive scan video
signal output from the conversion section and outputting
the converted progressive scan video signal to a progressive
scan video monitor. The aspect ratio conversion section
converts the aspect ratio of the progressive scan video
15 signal based on the determination signal indicating the type
of the video signal and monitor information indicating a
type of the progressive scan video monitor.
